

SERIAL NO. 10/005,846  
ART UNIT 1771

APPENDIX

1. (Previously presented) A method of improving the mechanical strength of a membrane comprising the step of:

providing a microporous sheet comprising a blend of an aliphatic polyolefin and a thermoplastic olefin elastomer selected from the group of ethylene-propylene rubbers, ethylene-propylene-diene terpolymer rubbers, and combinations thereof with the elastomer comprising less than 10 percent by blend weight.

2. (original) The method of Claim 1 wherein the elastomer comprises about 2 to 10 percent by blend weight.

3. (original) The method of Claim 2 wherein the elastomer comprises about 3 to 7 percent by blend weight.

4. (Previously presented) The method of Claim 1 wherein the microporous sheet has a Gurley air permeability less than 35 seconds/10cc.

5. (Previously presented) The method of Claim 4 wherein the microporous sheet has a Gurley air permeability less than 25 seconds/10cc.

6. (original) The method of Claim 1 wherein the polyolefins selected from polyethylene, polypropylene, copolymers thereof, and blends thereof.

7. (original) The method of Claim 1 wherein the thermoplastic olefin elastomer is selected from the group of ethylene-propylene rubbers, ethylene-propylene-diene terpolymer rubber, and combinations thereof.

8. (Previously presented) A method of improving the mechanical strength of a membrane comprising the step of:

providing a microporous sheet having a Gurley air permeability less than 35 seconds/10cc comprising a blend of an aliphatic polyolefin selected from the group consisting of polyethylene, polypropylene, copolymers thereof, and blends thereof, and a thermoplastic olefin elastomer being selected from the group consisting of ethylene-propylene rubbers, ethylene-propylene-diene terpolymer rubbers, and combinations thereof, with the elastomer comprising 3 to 7 percent by blend weight.

9. (Previously presented) A diffusion membrane comprising:  
a dry stretched microporous sheet comprising a blend of  
an aliphatic polyolefin and a thermoplastic olefin elastomer, the  
elastomer comprising less than 10 percent by blend weight, the  
polyolefin being selected from the group consisting of  
polyethylene, polypropylene, copolymers thereof, and blends  
thereof, the thermoplastic olefin elastomer being selected from the  
group consisting of ethylene-propylene rubbers, ethylene-propylene-  
diene terpolymer rubbers, and combinations thereof.

10. (Previously presented) The membrane of Claim 9 wherein  
the elastomer comprises between 2 and 10 percent by blend weight.

11. (Previously presented) The membrane of Claim 10 wherein  
the elastomer comprises between 3 and 7 percent by blend weight.
